

Installation

1 Cleaning the air hose

- A 1/4 in. air hose is required, with a maximum length of 25 ft.
- Clean the air hose of accumulated dust and moisture before connecting it to the air supply.

NOTE: If a longer air hose is required, connect a 3/8 in. air hose to the 1/4 in. air hose to ensure the spray gun has the necessary air supply.

2 Connecting to the air supply

- Always use clean dry air. Excessive moisture and dirt will greatly reduce the life of any air motor. We recommend the installation of an in-line filter-regulator as close to the tool as possible.
- Ensure all hoses and fittings are the correct size and secured tightly.

WARNING: Lubricators should not be used with spray guns. The use of an in-line lubricator will damage the paint finish.

Recommended Air Line Set-Up

Ref.	Description
1	Hopper Gun
2	Regulator
3	Quick Plug
4	Quick Coupler
5	Air Hose
6	In-line Filter
7	Air Compressor
